## Abstract

The transmission to and the storage in a customer server computer connected to a network of a plurality of client computers, a Hypertext Markup Language document that includes an embedded program applet for selectively accessing each of the application programs being distributed, and an embedded installation applet for accessing a program for installing the application programs being distributed on said client computers. When a user at one of the client computers wishes to have one of the application programs installed, the user requests the HTML implemented dbcument, preferably a Web page (i.e. an dpcument), to be displayed, the user selects one of the application programs for installation by clicking on the In response to such a displayed Web page hyperlink. selection, the installation applet is sent to and stored on the client computer that selected said application program. However, the selected application program is sent to this chient computer only after said installation applet is tored in said client computer.

to should be noted that the installation applet, which in turn, will access the installation program, may have already been sent to the client computer and stored thereing the time that the client computer requested the Web page the time that the client computer requested the Web page through the installation applet may have already been stored on the client computer in connection with the installation of a previously selected program. Thus, the installation applet is sent only if an installation applet has not previously been sent to said client computer.
